

# Compose SDK

Quickly build and integrate analytics into your products with ultimate flexibility.

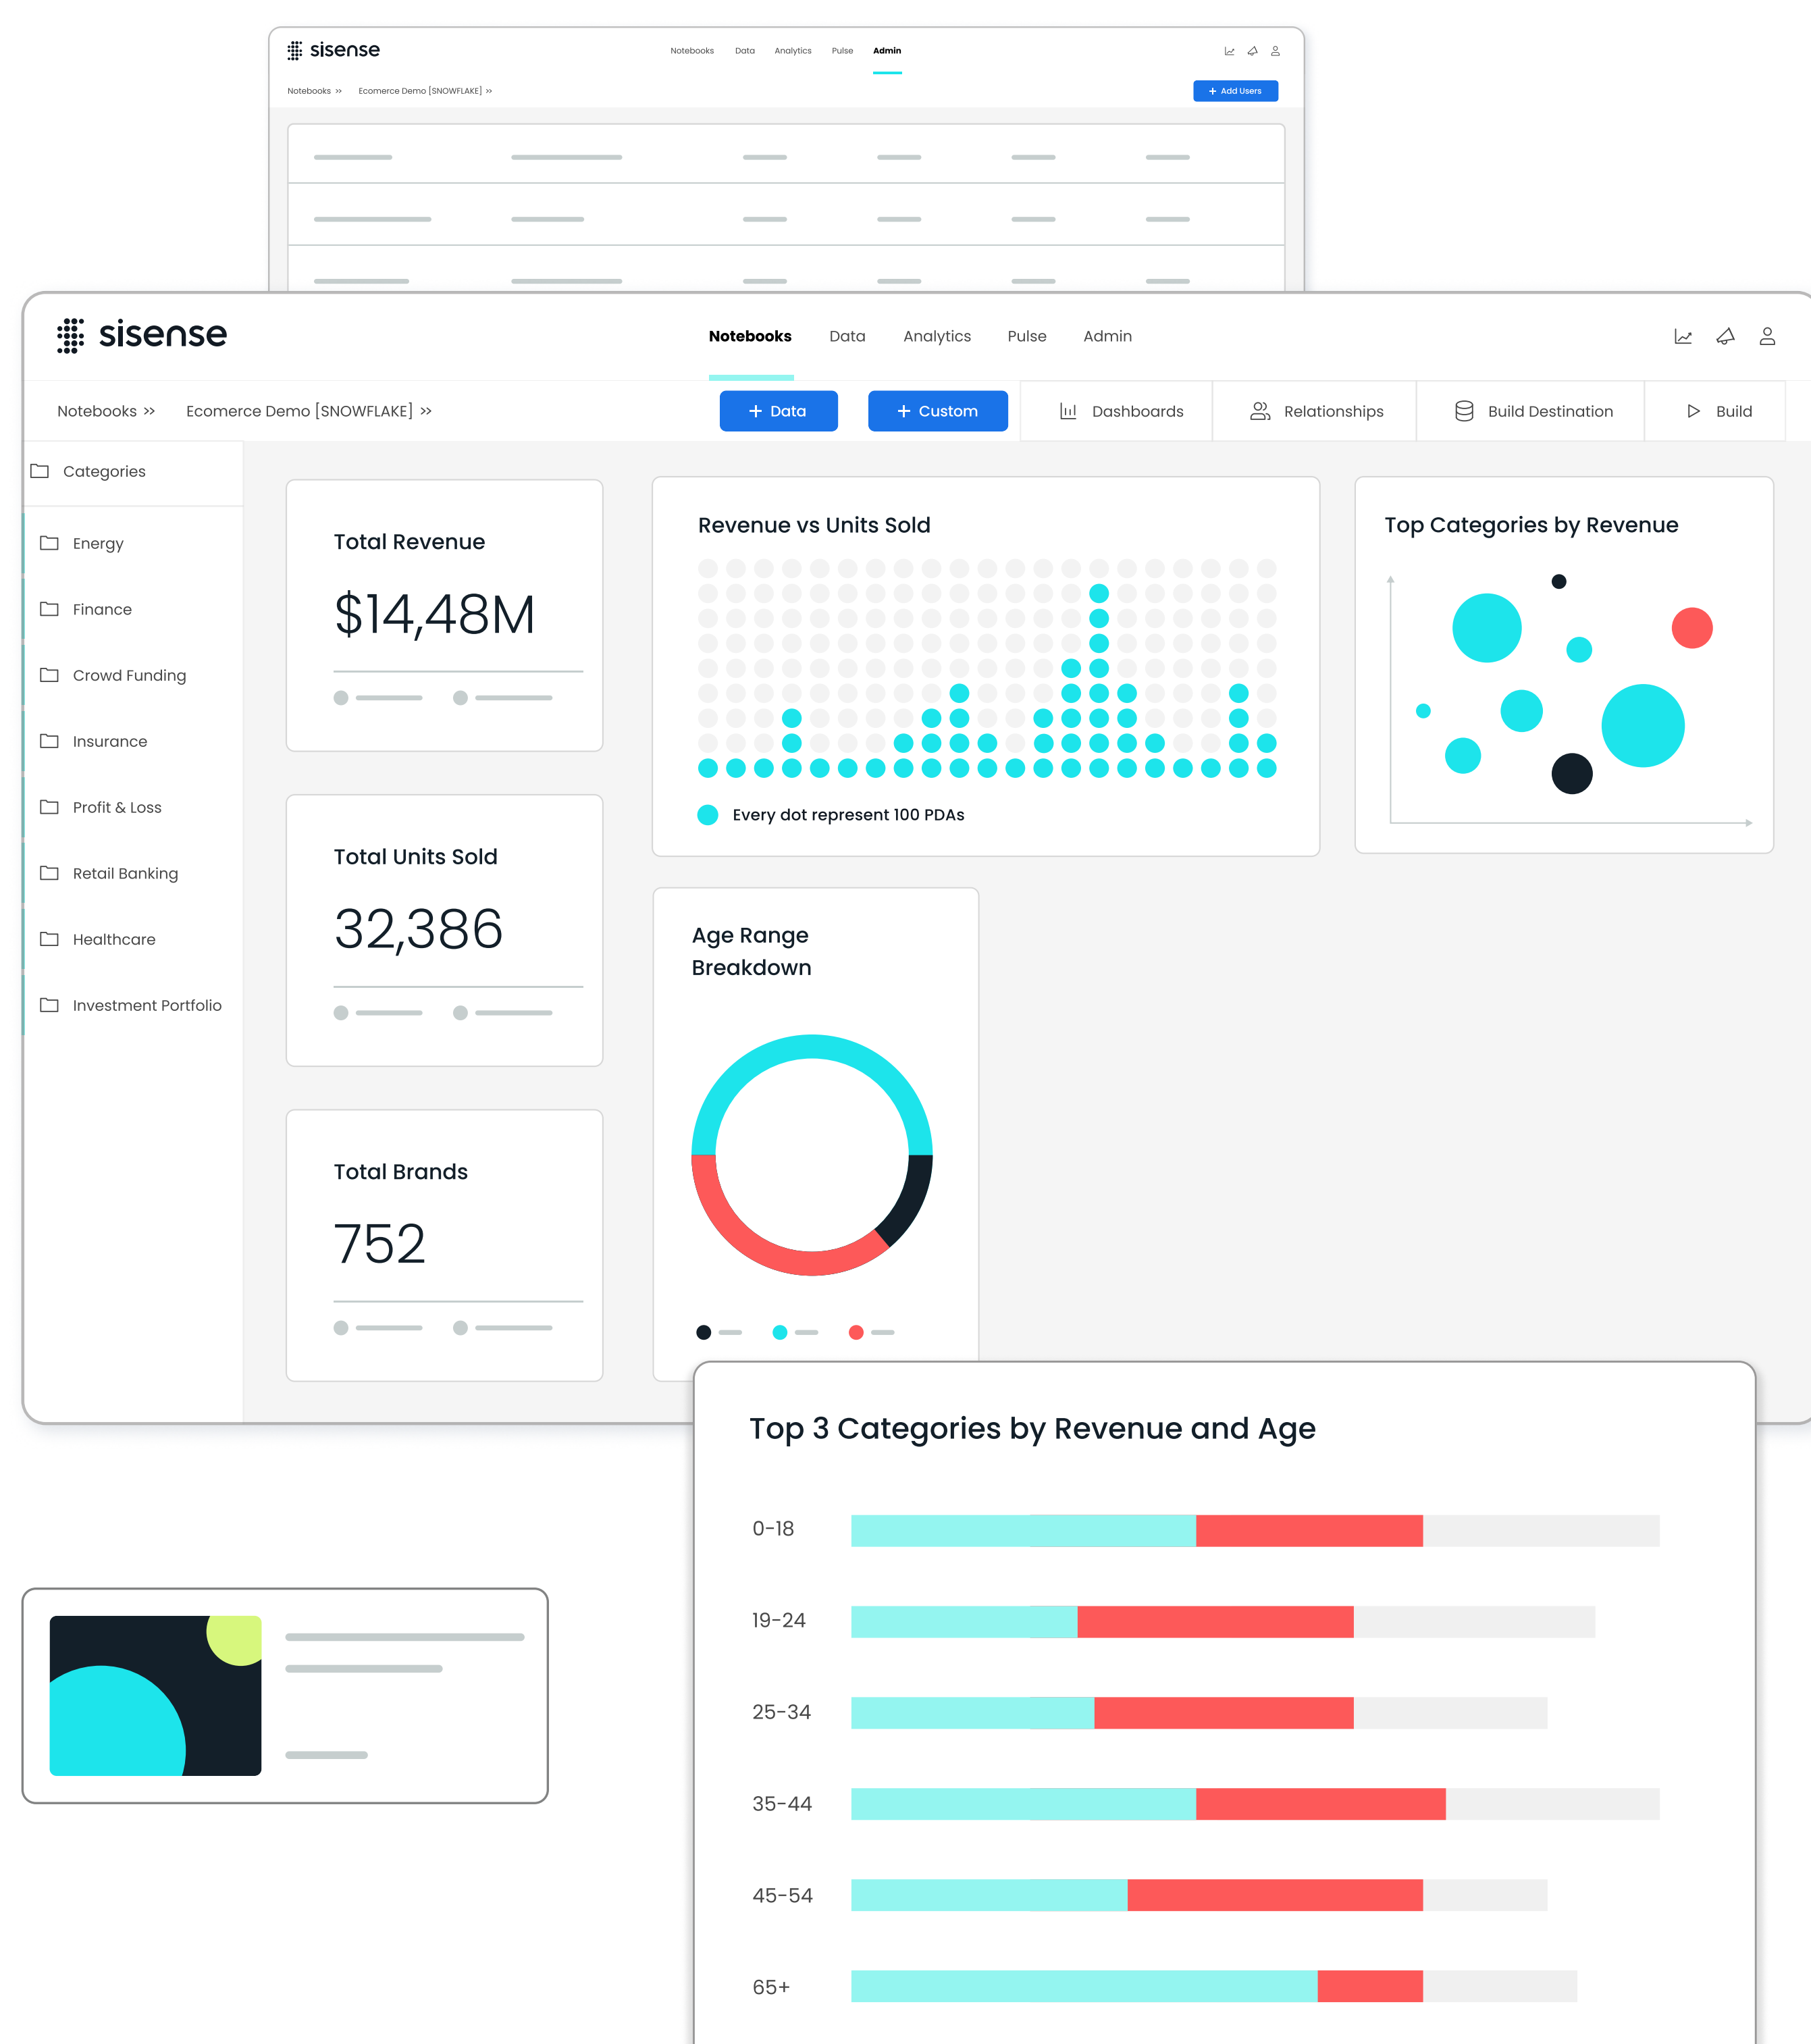

## Keeping up with customer expectations

Today's customers expect a smooth, intuitive experience when engaging with apps. But when it comes to apps with embedded analytics, delivering that experience is tough. Most solutions lack flexibility, don't align with your design principles, and often deliver poor and slow user experience.

## The solution: Compose SDK

Sisense Compose SDK is a software development kit that offers developers full modularity and flexibility in composing queries and creating data visualizations. It makes it easy to embed analytics in the context of your apps and business workflows.

## With Compose SDK

Flexibly build analytics driven apps that you can control

Create dynamic, run-time visualizations that integrate seamlessly with any third-party or custom components, enabling tailored, contextual experiences.

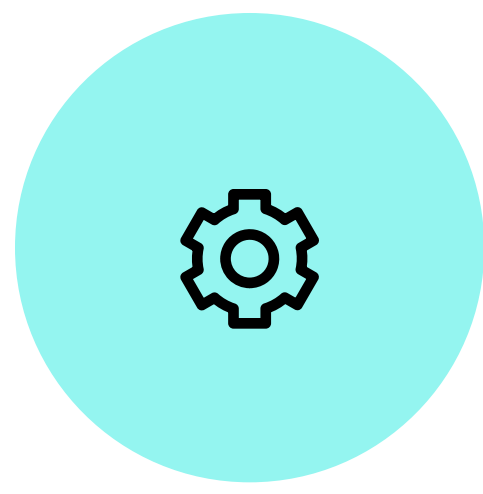

Create exceptional visualization to perfectly align with your design

Easily build widgets and dashboards with our composer and embed as a natural part of your product.

Innovate faster with easier development tools

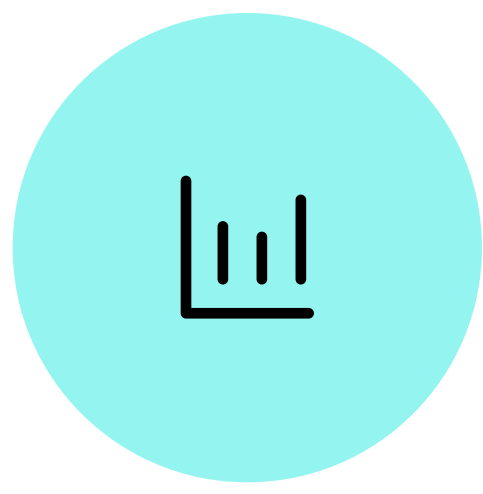

Build faster, move quicker, and accelerate innovation with ready made developer tools fully compatible with all the popular frameworks.

# How it works

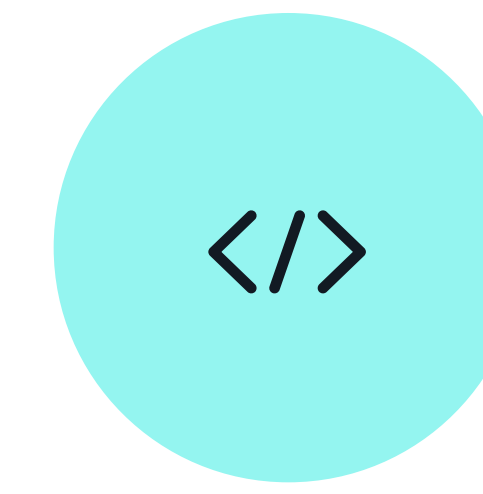

## Get the packages you need

Use NPM or YARN to install desired packages from the SDK as dependencies in your project.

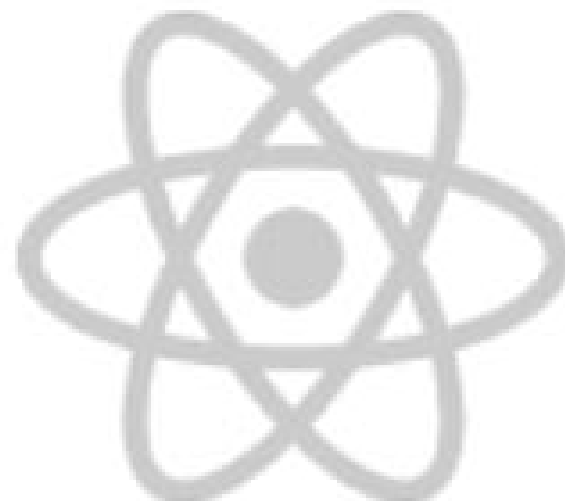

## Compose your visualizations

Create dashboards and widgets using the Fusion visual composer or directly in the code.

## Generate code that works with your app

Embed directly within your app as part of your existing developer workflow.

## For developers, by developers

Developer-friendly, Code-intuitive

Bring your own components or extend ours

Build 10x faster than in-house solutions

## Trusted by thousands of app builders and brands

“Compose-SDK allows us to envision a world of possibilities that puts our users in control.”

Eric Typaldos, Co-Founder & CTO, Hive

“Aside from being mobile friendly, Compose SDK allowed us to keep the exact same experience for our users on both desktop and mobile.”

Patrick Murphy, Senior Director of Data and Product, USA Swimming
